That the placement assessment and future of each “wildlife” species that comes into our care is always in the “wildlife” (native fauna) best interest.

The wildlife welfare is always our prime concern. There are many factors that come into play when placing Wildlife with the right Carer or Rehabilitator.

All of the below statements need to be taken into consideration on each wildlife placement.

- Occupational health and safety requirements.
- The temperament of the Wildlife.
- The experience and qualifications of the Carer / Rehabilitator.
- The physical (and mental) condition of the wildlife
- If • If the “wildlife” needs extra nursing skills
- The physical environment that each Carer /Rehabilitator can offer.
- Weight and stage of development.
- Release or non-releasable.
- For Joey's and other pack “wildlife” there may be a need for a buddy placement, and this will always be a first priority.
- It is our policy wherever possible that all Joey's and packing wildlife have buddy/friends
- Pen Release or Self Release or Release elsewhere as approved by HHWC
